"MODERN"

The Bionics Competent Network BioKoN conceived by J. Hansen, which had its beginning in our Saarbrücker approaches, has an essential share in the further blooming of bionic developments since the later 90er years. The network started with 7 members; over 50 universities, universities of applied sciences and arts, industrial laboratories and companies were unified in its follow-up organization. The number of the jobs and the bionic concepts increased strongly since then, also increased the variety of these researches. Parallel to it, "Biomimetics" is more and more carried out in the area of the Anglo-Saxon language. With it, bionics is worldwide on a good way. The collection of examples for this section essentially begins with the 90s years and is composed of teams of specialists.
