Neuropsychology of Memory and the Central Executive

1 Introduction 225

2 A Neuropsychological Model of Human Memory 225
2.1 Working Memory 225
2.2 Episodic and Semantic Memory 225
2.3 Explicit and Implicit Knowledge 226

3 Memory Disorders in Brain Lesions 226
3.1 Disorders of Working Memory 226
3.2 Anterograde and Retrograde Memory Disorders 226
3.3 Amnesic Syndrome 226
3.4 Confabulation 227
3.5 Extensive Retrograde Amnesia 227
3.5.1 Retrograde Disorders of Autobiographical Memory 227
3.5.2 Retrograde Disorders of Semantic Memory 228
3.5.3 Category-Specific Disorders of Semantic Memory 228

4 Anatomical Basis of Memory Disorders 229
4.1 Cerebral Substrate of Working Memory 229
4.2 Amnesic Syndrome 229
4.3 Extensive Retrograde Impairment of Semantic Memory 230
4.4 Extensive Retrograde Deficits of Autobiographical Memory 230
4.5 Memory Disorders in the Degenerative Dementias 230

5 Disorders of the Central Executive 230
5.1 Disorders of Problem-Solving 231
5.2 Disorders of Behaviour 231

6 Dissociation of Different Aspects of Central Executive Deficit 232
6.1 Integration and Inhibition 233
6.2 Cognitive Planning and Behavioural Control 233
6.3 Control of Behaviour as a Dual Cognitive Task 234

7 Anatomy of the Central Executive 235
7.1 Frontal Lobe Areas 235
7.2 Laterality of Frontal Lobe Lesions 235
7.3 Central Executive Deficits in Non-frontal Lobe Lesions 235

8 Conclusions 236

9 References 236
