Menière

International Titisee Conference
Schwarzwaldhotel, Titisee, Black Forest, Germany
March 19th–20th, 1976

Organizer/Editor: A. Meyer zum Gottesberge, Düsseldorf

The organizer wishes to express his thanks to Dr. Karl Thomae GmbH, Biberach an der Riß and Philips Duphar B.V., Amsterdam, for the generous support and to Dr. Hasso Schroeder for the assistance in all problems of organization.
Introduction

Menière’s disease is a fascinating disease and a disease of a fascinating organ, the labyrinth. There has always been and still today a touch of mystery about the origin (and perhaps the treatment) of Menière’s disease, and its real secret has not yet been discovered.

But we cannot deny, that on the other hand the laborious, hard work of many scientists has resulted step by step in astonishing progress in our knowledge. How much progress there has been in the research into Menière’s disease and how much we have achieved we can perhaps assess at the summing up of our meeting.

To establish the present state of our knowledge, we have organized a conference and not a congress. Every topic will be opened by a synoptic presentation of the present state of our knowledge by an authority in this field, and followed by an intensive discussion. This discussion is the essential purpose of our meeting.

A. Meyer zum Gottesberge
